Subject: Microsoft Settlement

I feel very strongly that the settlement is fair and just. I also feel that those that do not think so are driven by competitive motives that are not in the interest of those that use technology on a daily basis. I use MS products but do not feel that I have to use them and do use other products that compete with MS products. In no way do I feel that I am hindered as a consumer due to MS's business practices if there is a better product out there I will purchase it to run my business.
